SHIBAPAW

ShibaPaw will use a Multi-Phase Initial Coin Offering (ICO Presale – 18%) Mechanism. In each phase of ICO, the ShibaPaw Token (ShibPaw) price will increase by 10 percent.

2 Anti-whale mechanism

Transactions are limited to \$10,000 in the private and public sales to help implement the anti-whale mechanism.

2.1. Anti-dump mechanism

To help prevent dumping we have a vesting mechanism (section 2.2) and also, we have a scheduled timesheet for the distribution of Airdrops and ICOs. In this mechanism, the distribution will be done within 12 weeks after the start, and if the recipient dumps, the distribution of her/his tokens will be delayed for 3 months after the last distribution. Tokens will be divided into 12 portions and investors will receive one portion per week.

2.2. Vesting period

ShibaPaw has a vesting period for the below groups for two years:

- 1. Team**
- 2. Advisors**
- 3. Private investors**

The above vesting period is to prevent dumping by team, advisors, and private investors.

ShibaPaw doesn't have any vesting period for ICO participants, so token distribution will start after CEX listing (Based on whitepaper section 2.1) and they will be tradable based on whitepaper section 2.1

SHIBAPAW

	Percentage	Vesting time
Team	17.5%	2 years after the first CEX listing (Based on whitepaper section 2.2)
Advisor	4.5%	2 years after the first CEX listing (Based on whitepaper section 2.2)
Private investors	4.5%	2 years after the first CEX listing (Based on whitepaper section 2.2)

2.3. Burn strategy

ShibaPaw will have a token burn strategy to decrease the total supply and to prevent price dumping.

This strategy will be introduced in the next versions of the Whitepaper.

This strategy will be designed to prevent dumping in the best way with the highest efficiency.

2.4. Technical Details

2.5. SHIBAPAW Main-net

For now, SHIBAPAW ecosystem uses the Binance Smart Chain (BSC) network.
